# Tips & Tricks to Feeding 2022 Corn Silage

John Goeser  
PhD, PAS, Dipl. ACAN

1

## Goeser's Agenda

- Economic opportunity in Dairy
- Basic silage nutrition training
- Zero in on 2022 Silage quality
- Arm you with insight & strategy for better nutrition decisions:
  - Feeding 2022 silage
  - Growing & harvesting better 2023 silage

### Overly Simple 2022 Silage Recap

Region/Parameter	Moisture	Maturity	Starch	NDFD	StarchD	Feeding Potential?
East	Down	Up	Up	Down	Down	Down
Midwest	Up	Not sure	Up	Up	Down	Neutral to Up
West	Up	Down	Down	Up	NC	Neutral to Down

ROCK RIVER LABORATORY, INC. INDUSTRIAL HEALTH

16

## Unique Observations / Questions

- Extremely wide range to quality across the US this year
  - Western US higher moisture, less starch, ash creeping up and average NDFD
  - Eastern US lower moisture and more mature corn silage
  - Midwestern US ideal moisture, more starch but less starchD, and decent TTNDFD ... Black Sheep?!
  - Southern US silage looks to be good quality
- Watch outs for feeding 2023
  - *Know what you've got... Incredible variation in our pits & piles*
  - West? Fermentation quality
  - East & Midwest? Rumen starch digestibility!

17

## Zeroing in on your Silage - Like sighting in a rifle

— Dr. John Goeser —

18

Sample with a 3 to 5 shot group

22

23

24

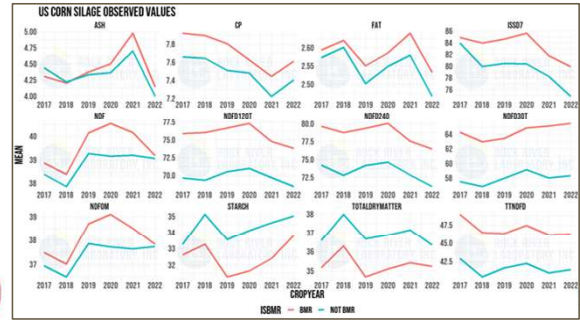

## Hybrid Plots: Your Dairy can do this!

- **Control for:**
  - Growing conditions
  - Plant population
  - Soil type & fertility
  - Crop protection
- **Basic:**
  - Run strips
  - Measure yield & 3+ samples per hybrid for quality
  - Compare hybrids
- **Advanced:**
  - Plant replicated plots
  - Measure Yield
  - Several samples per replicate plot
  - Data robust for stats analysis

25

## BMR v Conventional: RRL Database

26

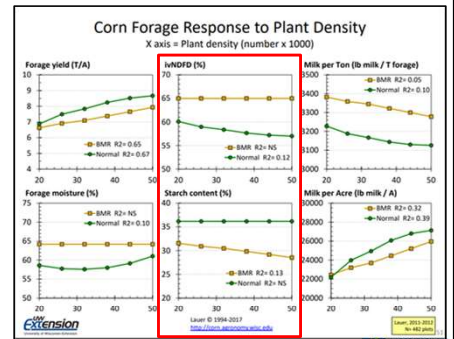

## Turning the page to 2023 - Economic Driven Decisions

27

## Plant Population Impact

- Plant populations matter
- Conventional corn responds differently than BMR

28

### Crop Input Decisions

- Expensive \$\$\$, but...
- 2023 crop needs to be in position to succeed
  - Fertility
  - Crop health / NDFD
  - Grain yield

29

### Harvest 2023

Moisture vs. Kernel maturity disconnect may impact our harvest timing

30

### Cut Height Impact

Table 2. Effects of cutting height on nutritive value of whole-plant corn silage.<sup>1,2</sup>

Parameter	n	Effect
Dry matter, % of as fed	62	+2.18
NDF, % of DM	64	-2.48
Lignin, % of DM	25	-0.29
NDFD, % of NDF	49	+2.02
Starch, % of DM	55	+2.08
DM yield, ton/acre	52	-0.52

<sup>1</sup> Adapted from Paula et al. (2019).  
<sup>2</sup> Data expressed as expected response per each 10-inches of increased cutting height.  
<sup>3</sup> NDFD – ruminant in vitro or in situ NDF digestibility at 30 or 48 h.

Table courtesy of Luiz Ferraretto (2020, personal communication)

31

### Cut Height Performance Impact

High cut vs Normal <sup>2,3</sup>	Normal		High (+10")		Diet outcome	
	Normal	High (+10")	Normal	High (+10")	Normal	High (+10")
CP	45.5	47.5	35.4	35.4		
CP/DM	31.5	35.1	32.2	32.2		
Starch	4.0	4.0	28.3	27.6		
Starch/DM	2.5	2.5	17.6	17.6		
Starch/CP	4.0	4.0	15.5	15.8		
CP/DM	10.0	9.5	4.08	3.90		
DM yield	35	35				
DM yield/acre	25.5	25.5				
Starch yield	25.2	25.2				
TTSD			95.60%	95.60%		
Rum. StarchD	77.7	77.7	72.3	72.3		
TTNDFD	41.5	43.6	47.3	48.2		
NDFD/DM	75.1	75.1				
Lbs Fed	19.0	19.0	55	55		
DMI			55	55		
Forage/Conc			52.7%	52.7%		
Milk/Cow			88.0	89.2		
FCE			1.60	1.62		
Milk Price	\$20.00	\$20.00	\$17.61	\$17.85		
Cost/lb TMR	\$0.11	\$0.11	\$6.05	\$6.05		
Feed cost / CWT			\$6.87	\$6.78		

Projections using table provided by Luiz Ferraretto (2020, personal communication)

32

### Corn Silage Kernel Processing Score

- Western US leading the pack!
- *New goal in KPS is 75 to 80*
  - Top 15% producers hitting this mark
